Digital Literacy Assignment Report

- ***Name : Ansh Pansuriya***
- ***Reg. No. : 25MIP10133***
- ***Branch : Integrated MTech(Computational & Data Science)***
- ***Year : 2025-2026***
- ***Date : 28th March, 2026***
- ***Course Code : CSE0001***

Introduction:

In today's digital age, developing strong digital literacy skills is essential for academic success and personal safety. These tasks collectively focus on building awareness, technical skills, and responsible online behavior. From creating an informative infographic using Canva to developing a professional digital portfolio through platforms like GitHub, LinkedIn, and Kaggle, each activity contributes to a well-rounded digital foundation. Practical experiences such as coding on HackerRank and creating quizzes using Google Forms enhance both technical and collaborative skills. Additionally, these tasks emphasize effective digital communication and awareness of online financial risks. Overall, they provide a comprehensive understanding of how to use digital tools efficiently, communicate responsibly, and stay safe in an increasingly technology-driven world.

Task-1 :

I created my digital literacy awareness infographic using Canva, which is a simple and effective design tool for creating visual content. I selected a clean infographic template and customized it using icons, colours, and structured sections to make the information clear and visually engaging.

My infographic covers several important aspects of digital literacy. First, it explains what digital literacy is and why it is essential in today's technology-driven world. It also highlights useful digital tools for students, such as Google Docs and Canva, which help with collaboration and creativity. In addition, I included safe internet practices like using strong passwords, avoiding suspicious links, and protecting personal information. I also added a section on email etiquette to show how to communicate professionally online.

One challenge I faced was fitting all the required information into a single page without making it look overcrowded. I found it interesting to organize content using icons and sections to improve readability. Overall, this task helped me better understand digital literacy and improve my design skills.

- ***Task-2 :***

I have created my digital portfolio using GitHub, LinkedIn, and Kaggle to build a strong professional online presence. GitHub is used to showcase my coding projects and track my progress in programming and data science. I plan to upload projects, practice problems, and collaborate with others to improve my technical skills.

LinkedIn is a professional networking platform where I can connect with peers, teachers, and industry professionals. I have updated my education details and will use it to share my achievements, internships, and learning progress over the next four years.

Kaggle is a platform specifically for data science and machine learning. I will use it to practice datasets, participate in competitions, and improve my analytical and problem-solving skills.

Over the next four years, I aim to consistently update these platforms with my work, build a strong portfolio, and gain practical experience in data science. These platforms will help me prepare for internships and future job opportunities.

- ***TASK-3 :***

For Part A, I used HackerRank to practice coding skills. I created an account and completed the beginner-level challenge “Solve Me First.” This task helped me understand basic input and output in programming and improved my problem-solving ability. It also gave me confidence in writing simple code and understanding how coding platforms work.

For Part B, I created a Google Form titled “Digital Literacy Awareness Quiz” with five questions, including multiple-choice and short-answer types. This activity helped me learn how to design quizzes, collect responses, and analyse data using Google Sheets. These tools are very useful for academic collaboration, conducting surveys, and organizing information efficiently.

Overall, both platforms enhanced my digital and coding skills, which will support my academic growth and teamwork in future projects.

- ***TASK-4 :***

Poor digital communication can lead to serious misunderstandings and consequences. For example, a student once posted a sarcastic comment about a group project in a class chat, intending it as a joke. However, other group members misinterpreted the tone as criticism, which created conflict and reduced team cooperation. The situation escalated because the message lacked clarity and emotional context, which is often missing in digital communication.

This issue could have been avoided if the student had communicated more clearly and respectfully, or chosen a more appropriate channel, such as discussing concerns privately. Using polite language, emojis (in informal contexts), or clarifying intent can help prevent misunderstandings. Overall, being mindful of tone and audience is essential for effective digital communication.

- ***TASK-5 :***

While researching this topic, what surprised me most was how simple tricks can lead to serious financial loss. Many frauds do not involve hacking but instead rely on human error and lack of awareness. The fact that entering a UPI PIN—something people do daily—can instantly transfer money to a scammer was particularly alarming.

I also realized that young people, including college students, are highly vulnerable because they frequently use digital payment apps without fully understanding the risks. The speed of UPI transactions makes it even harder to recover lost money.

As a result, one habit I will personally change is being more cautious before approving any payment request. I will carefully verify every transaction and avoid reacting quickly to urgent or suspicious messages, ensuring better control over my digital financial safety.

- ***CONCLUSION :***

In conclusion, these tasks have significantly improved my understanding of digital literacy and its practical applications. I have gained valuable experience in using digital tools, creating content, and building a professional online presence. Platforms like GitHub, LinkedIn, and Kaggle will continue to support my long-term career development, while coding and quiz creation activities have strengthened my technical and analytical skills. I have also learned the importance of clear communication to avoid misunderstandings in digital spaces. Most importantly, awareness of online financial fraud has made me more cautious and responsible when using digital payment systems. These learnings will help me make better decisions,

protect my digital identity, and grow confidently in both academic and professional environments.
